Assignment 5.1: Written, Oral, and Graphical Communication

Blizhel Torralba | CPE11S2 | CPE 008 - Computer Engineering as a Discipline

1. Do you think an engineer should also be good in written communication? Why? Explain and justify your thoughts.
   - Yes, I believe that engineers should also be good in written communication because it is important in the work that they do, reports, progress, plans, studies, and documentation. Engineering works should be documented, because this will be a permanent record that is reliable and ensures accuracy in everything. Because engineers work in a field that deals with complex details, designs, and logics, proper and clear documentation of everything ensures that a project is continuing smoothly and without miscommunication. Writing is also how engineers present their work, such as feasibility studies and proposals, it is important that these works are properly written to be understandable and convincing.
2. How would you differentiate oral communication from engineering graphical communication?
   - Oral communication relies only on interaction and only works well for sharing ideas, information, feedback, and when discussing as a group. While engineering graphical communication uses visual tools like blueprints and CAD models that is helpful when presenting designs that are important in engineering work. Graphical communication provides a proper visual representation that will guide engineers in creating their ideas.
3. As a future engineer, how would you justify the popular phrase "Communication is the key" in workplace?
   - As a future engineer, this phrase is true because engineering is not a solo work, it requires teamwork and collaboration with everyone involved in a project. Without clear communication with everybody involved, especially the people who are making the decisions, ideas, and projects cannot be made. Explaining and presenting complex ideas through communication like reporting are important because it closes the gap between experts and the people that are not familiar with the technical aspects.
